

At equal arm count, a different representation is worth no more than a rerun

In 2 of the 2 cells that carry a measured floor, the representation arm lands INSIDE the rerun band. The other six cells have no floor, so nothing is claimed for them — a band is never borrowed across cells. This is the like-for-like comparison; the five-arm ceiling is in F8.

Source: noise_floor_inventory.md §2 (one-arm margin) + §1b (null spread). △ The WA row pools five modes over ten shared tasks and is not a floor for its own baseline arm — see the source.
