

The ceiling is real — and it is read next to what repetition alone delivers

△ The bars add FIVE arms; the band adds ONE. They are not subtractable, and no arithmetic is done across them here — the band is printed because the headline gain should never be read without it. The like-for-like one-arm comparison is in F10b.

Source: noise_floor_inventory.md (§1 floors, §2 five-arm gains). 8 cells across two benchmarks. Oracle is retrospective and not deployable.
